

SUNIL SHARMA

Software Engineer

📍 Kathmandu, Nepal | 📞 +977 9867970568 | ✉ sunilxrma0@gmail.com | 🔗 [sunil-sharma-559655322](#) | 🌐 sunil1289

Professional Summary

Backend-focused software engineer with experience building production-grade REST APIs, Spring Boot microservices, and automated CI/CD pipelines. Delivered measurable impact: sub-50 ms API response times, ~70% reduction in manual release overhead, and 3-factor smart-contract authentication on Ethereum. Seeking backend or full-stack engineering roles to build and scale distributed systems.

Technical Skills

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST API Design, JWT, OAuth 2.0, RBAC, Node.js, Express.js

Frontend: React.js, TypeScript, JavaScript, Tailwind CSS, HTML/CSS, Web3.js

DevOps & Cloud: Docker, GitHub Actions (CI/CD), Linux CLI, Git, GitHub

Databases: PostgreSQL, MySQL, MongoDB, JdbcTemplate, Query Optimization, Compound Indexing

Testing & Tools: JUnit 5, Postman, Swagger/OpenAPI, Solidity, System Design, Distributed Systems

Experience

Java Developer Intern | AlphaTeds

Oct 2024 – Jan 2025

Kathmandu, Nepal

- Engineered 5+ Spring Boot REST endpoints; introduced structured logging middleware that surfaced root causes of ~15% of recurring runtime errors, accelerating debugging and incident resolution.
- Delivered a 12-endpoint REST API for wallet and transaction management with JWT auth, RBAC, and **sub-50 ms** average query response time via indexed PostgreSQL queries using JdbcTemplate.
- Achieved **65%+** JUnit 5 test coverage on business-critical modules; documented all contracts with Swagger/OpenAPI; eliminated SQL injection risks across 3 high-traffic endpoints.

DevOps Intern | KtmBees

Mar 2025 – May 2025

Lalitpur, Nepal

- Containerized 3 backend microservices with Docker, reducing environment setup time from ~45 min to **under 5 min** and eliminating environment-specific deployment failures across dev and staging.
- Designed GitHub Actions CI/CD pipelines automating build, test, and deploy stages — cutting manual release steps by **~70%** and ensuring reproducible, zero-downtime deployments.

Blockchain Fellow | eSatya

Jan 2025 – Mar 2025

Lalitpur, Nepal

- Architected a decentralized e-voting DApp on Ethereum with immutable Solidity smart contracts; engineered **3-factor voter authentication** (facial recognition + OTP + MetaMask signature) to eliminate identity spoofing.
- Applied reentrancy guards and strict input validation to harden contract logic; built React + Web3.js frontend cleanly separating mutable MongoDB state from immutable on-chain vote records.

Projects

E-Voting System — Decentralized Blockchain DApp | Solidity · Ethereum · React · Express.js · MongoDB · Web3.js

- Designed end-to-end voting architecture on Ethereum; enforced immutable vote records with cryptographic auditability and 3-factor voter authentication achieving zero identity-spoofing vulnerability.
- Decoupled on-chain vote state from off-chain MongoDB session data, enabling reliable audit trails without on-chain storage bloat.

PipelineIQ — CI/CD Monitoring Dashboard | Spring Boot · React.js · Docker · Jenkins · Prometheus · Grafana

- Built a real-time DevOps dashboard tracking full CI/CD lifecycle (build → test → deploy) with Jenkins-triggered pipelines and Prometheus/Grafana integration for live metrics visualization and system observability.
- Implemented severity-based alerting backed by MongoDB + Redis, surfacing MTTR, deployment frequency, and build success rate across historical pipeline runs.

Job Portal System — Full-Stack Application | Spring Boot · React (TSX) · Tailwind CSS · MongoDB · JWT

- Engineered dual-role job portal (Seeker/Employer) with JWT sessions and dark-mode React/TypeScript UI; reduced search response time by **~40%** via compound MongoDB indexes; added server-side pagination for scalability.

Education

Bachelor of Computer Applications (BCA)

Completed Dec 2025

Universal College, Maitidevi — Kathmandu, Nepal
